

Spreading Beyond Horizon

Resource ERP is a comprehensive Enterprise Resource Planning system that offers industry based best-practices for multi-mode manufacturing.

Manufacturing

# Manufacturing ERP - Xcel

## **Xcel eresource ERP is built for Job Production manufacturing companies**

Xcel eresource ERP is developed specifically for SME sin Job Production manufacturing, specializing in small quantities of custom made parts or jobs, which are unique and one off in nature having low volume and high variety, such as Machineries, Consumable Goods, Furniture, Architects, Ship Building, Smartphones, etc..

## **Non-Integrated Fragmented Processes**

Job Shop manufacturers are slow to overhaul their manufacturing operations—despite problems of mediocre quality, excessive lead times, unreliable delivery, and high costs. The imposing and conflicting demands under which the job shops operate, makes them to live with performance problems, feeling that "We have done everything now, there's nothing left to try".

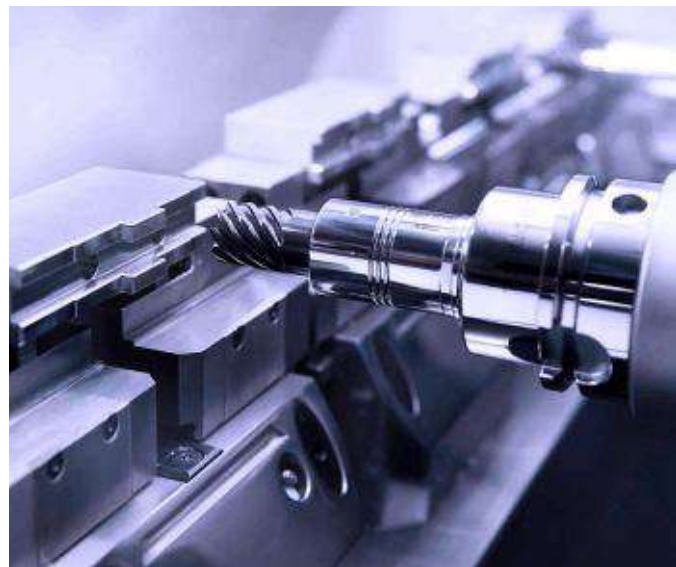

## **Improve Performance and Reduce Cost**

Improvements in Job Shop performance are possible. What's required are radical changes in the way we operate. Implement Xcel eresource ERP solution which enables you to low-overhead, fast response manufacturing. Ideally master-scheduled items should proceed in-work continuously, No queues between successive operations where different workers in different work centers.

Companies require functionalities in a software which cater to areas such as Engineer-to-Order, Make-to-Order, Job Work, Contractors, Maintenance Repair and Overhaul. Xcel eresource ERP is configurable to help users in organizations to be more productive effortlessly than ever before, addressing various functional areas, such as.

- Sales
- Purchase
- Inventory
- Finance ad Accounts
- Human Resources
- Bill of Materials
- Master Production Schedule
- Material Requirement Planning

3GL

ERPs rarely get into fleet management. However, eresource ERP is an extensive and well integrated software for Fleet and Transportation Industry.

Transportation

# Fleet Management ERP eresource 3GL

**3GL eresource ERP solution is clutch-fully designed to tightly integrate and smoothen the business processes of**

transportation businesses, the solution is designed primarily to empower commercial fleet-based organizations catering to all those businesses that move cargo by land from one point to another using tractor-trailers, known as trucking, a subsector of transportation industry. Trucking carries 80 percent of all consumer goods, without which, economies locally, regional, national and international would disintegrate. Over-the-road transportation is provided by motor vehicles over short and medium distances. The trucking solutions allows a trucker to run a Truckload (TL) that dedicate trailers to a single shipper's cargo. TL shipments are the largest part of the market.

**Success is more talked about, than retained**

Trucking businesses face a myriad of difficult issues every day, that take most of the time and needs a solution that can help overcome; Schedules gone astray, Drivers don't arrive when they should, Can't track driver breaks, Drivers not being given enough time to complete their journeys against the standard time duration, which makes them to rush, and causes undue stress and strain on driver and their vehicle, The reality of vehicle theft, difficulty seeing the route your drivers are taking, Slow-down on certain routes around a certain time regularly, Too much time spent on doing paperwork and reporting, Your running costs are too high, Customers are unhappy and you are losing money.

**Save more by doing less**

The need to properly manage the increasingly complex operations of commercial fleet-based companies. A start to finish experience that enhances your capability to, Driver monitoring, Incentivize good driving and rewarding your best drivers, Tracking transportation under AMC, Fleet Tracking, Vehicle break-down and accident transshipment, Vehicle Maintenance & it's Schedule, Fuel Efficiency, Cost containment, Ongoing concerns about safety, and myriad of other benefits. Data collected from the tracking system and delivered through Dashboard and Reports helps reduce paperwork and reporting. Investing in the solution will result in an upturn in profits over time. Fleet tracking system allows you to find out the real problems in your business by using the modules making your journey less painful.

## Modules

- Contract Management • Operation

A significant underpinning of any successful company is an agile, proactive, and responsive Warehouse Management System (WMS).

Warehouse

# Warehouse Management Resource WMS

## **Make your working system quick, transparent and error-free**

Organizations in the manufacturing industry requires a full-blown Warehouse Management System (WMS), particularly if their operation relies on an automated racking system that are housed in a rack-mounted structure with its own track-mounted materials-handling system.

Resource WMS is a **100% Web-based modern ERP** solution designed on latest Technology platform that is compatible and works best with **Google Chrome, Mozilla FireFox and Internet Explorer**. Besides, this application is also technology independent. It works on **Windows, Android, iOS and Linux**.

An effective WMS can reduce human errors by preventing product from being putaway in the wrong location, picking the wrong product, or picking the correct product with wrong quantities. Additionally, such a system can increase the productivity of the warehouse by reducing traveling time, maximizing the use of available space, and suggesting moves for better space utilization.

## **Flexibility and adaptability**

You may have the hottest product ready to hit market. You may have the best marketing campaign ever conceived. You may have phones ringing off the hook with interested prospects. You may have all this and more. But the simple fact remains that, if you cannot locate, pick, pack, and ship material and products that are in your warehouse, these great feats go for naught.

### **Module that make your work easy.**

- Finance and Accounts Management
- Master Configuration
- Warehouse Management
- Purchase Management
- Material Handling
- Operations
- Inventory Management
- Logistics
